Solutions

Mobius Replacement Solution

ApertureONE Export Utility For Mobius DAF Files

The Challenges Of Content Management Evolution

Implementing a new ECM platform is not without significant challenges, including how to manage already locked in proprietary storage. Due to the proprietary nature of deep archives such as Mobius, continued access to enterprise report and fixed data can incur serious costs.

Manually transforming legacy content internally or through outsourcing to a services group demands tremendous cost of time and resources. Continuing to support a legacy archival system such as Mobius perpetuates a series of unnecessary licensing, services and maintenance fees; at a higher level, legacy support runs against the vision and benefits of embracing a new ECM platform.

Legacy Migration Solutions

Acartus offers the ApertureONE Export Utility for Mobius DAF files, which exports Mobius DAF form standard specification. Normalized content can be stored in an ApertureONE repository, or placed in Documentum for full ECM integration. Complementing ApertureONE's ongoing content capture utility, migration realizes true content consolidation with all past and present content stored in a unified repository.

Content Ownership Through Open Standards

ApertureONE normalizes all legacy and day-forward input to portable document format (PDF). A full standard specification, all original content and appearance is preserved to any user via a PDF view. ISO standard is currently under development for PDF digital document archival. PDF offers file content reduced object overhead, and improved digital compliance. Equally important, open-standards enable users to take true ownership of their content, providing continued accessibility.

ApertureONE For Documentum: Integrated Report Management

For companies exploring or replacing Mobius with a Documentum ECM platform, ApertureONE offers value. The only scalable, cross-platform ERM integration for Documentum, ApertureONE captures, places fixed content into the Documentum content repository. ApertureONE uses Documentum API content and apply content-process fusion, such as workflow initiation, security, lifecycles and record management. Documentum customers achieve full ERM capabilities through their ECM platform.

Beyond Archival: ERM Evolved

Acartus also offers ApertureONE Distribution Server and ApertureONE Mining Server to further extend the value of fixed content. Distribution Server delivers secure email distribution of content. Mining Server offers exclusive ability to leverage the entire ERM repository as a data warehouse. Mining Server performs and makes this data available to business intelligence platforms (Cognos, Business Objects, MicroS

and reporting tools (Crystal Reports, etc.).

ApertureONE provides a solution for organizations seeking to move their fixed content out of Mobli silos; our proven technology ensures migrations run smoothly and rapidly, without the considerable and questionable reliability of custom, one-off solutions. For more information about ApertureONE solutions, including legacy migration, independent and integrated report management, distribution services, please call 1.970.212.7002 to speak with an ApertureONE account manager.
